

Database Review

*The goal of a **DATABASE REVIEW** is to make sure, that the database system is properly configured and meets all recommended standards. An inspection, based on a collection of snapshots, performed by a dedicated support engineer will identify known bugs or issues which affect the database system.*

Furthermore, optional ways to reduce consumption, such as base load or maintenance efforts can be declared. This additional service aims to increase the availability and overall performance of the database system. It will not tune specific functionalities.

Result

- ▶ Review document with extensive descriptions of the issues found by the analysis
- ▶ Configuration advice (initialization parameters, memory management, resource management and others)
- ▶ Declare potential candidates for performance tuning (SQL, procedures, scheduling, etc.)

Range of Application

- ▶ Configure the database (system) for use with Intershop software
- ▶ First step in preparation for peak loads
